Lesson1: COMMUNICATION PROCESSES, PRINCIPLES, AND ETHICS

- **Language** (according to linguists) – Language can only be called a language if it has *a system of rules* (grammar), *a sound system* (phonology), and *a vocabulary* (lexicon).
- **Language** (by definition) – A systematic means of communicating ideas or feelings by the use of conventionalized signs, sounds, gestures, or marks having understood meanings.
- **Speech community** – People who belong to the same group understand each other since they use the same language.
- **Language acquisition** – This happens while growing up, people acquire the languages used by those in the community.
- **Mother tongue** – The language acquired while growing up. Sometimes called as your first language.
- **Second language** – People learn these languages by studying formally in school or informally on their own.
- **Language learning** – The process or learning a language regardless if it is your first or second language.
- **Language contact** – As one tries to understand another language (aside form Filipino and English), you will try to find ways to understand each other and eventually be able to communicate with one another.
- **Language change** – The result of language contact.

What is communication?

Communication is a process by which information is exchanged through a common system of symbols, signs, or behavior.

- ***Context*** is the circumstance or environment in which communication takes place.

TYPES OF COMMUNICATION ACCORDING TO MODE

1. **Verbal Communication** – is the use of words to convey a message.
2. **Non-verbal Communication** – is the use of body language to convey a message.
3. **Visual Communication** – is the type of communication that uses visuals to convey information and/or messages.

TYPES OF COMMUNICATION ACCORDING TO CONTEXT

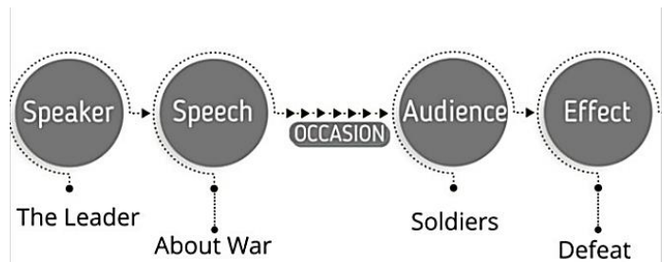
1. **Intrapersonal communication** – talking to oneself
2. **Interpersonal communication** – an interactive exchange of information between two people, among and/or together with others.
3. **Extended communication** – involves the use of electronic media.
4. **Organizational communication**
   - **Formal structure** – allows communication to take place via designated channels of message flow between positions in the organization.
     - ***Upward communication*** – subordinates send communication to their superiors bearing their views/feedbacks on organizational policies, issues related to their jobs, and the like.
     - ***Downward communication*** – from superior to subordinate, usually asking certain individuals to perform a certain task.
     - ***Horizontal communication*** – the communication across departments or with peers of equal rank in the organization. Also known as lateral communication.
     - ***Crosswise communication*** – the communication from different units or departments working at various levels.
   - **Informal structure** – comes from unofficial channels of message flow.
5. **Intercultural communication** – interaction between or among people having different linguistic, religious, ethnic, social, and professional background.

TYPES OF COMMUNICATION ACCORDING TO PURPOSE AND STYLE

1. **Formal communication** – employs formal language delivered orally or in written form such as lectures, public talks/speeches, research and project proposals, reports, and business letters.
2. **Informal communication** – involves personal and ordinary conversations with friends, family members, or acquaintances about anything under the sun to simply socialize and enhance relationships.

COMMUNICATION MODELS

1. **Aristotle's Communication Model** – the oldest communication model that was designed to examine how to become a better and more persuasive communicator.

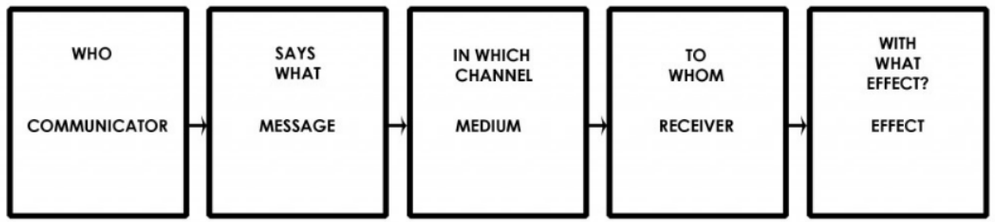


Three Elements of Aristotle's Model of Communication

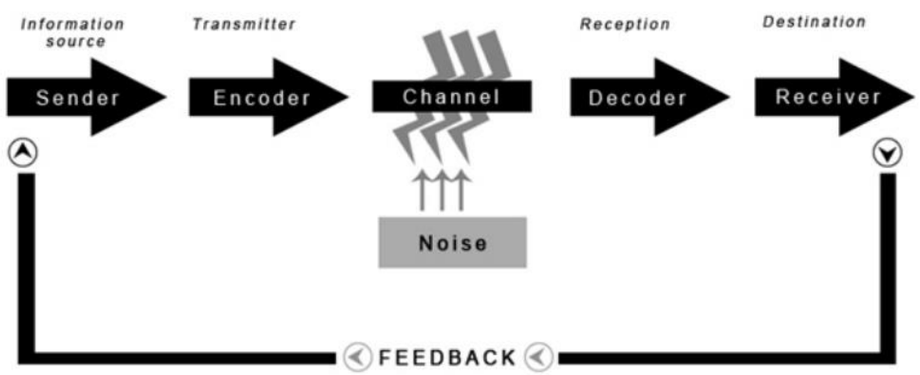
A. **Ethos** – is the characteristic that defines the credibility of the speaker in a communication model.
B. **Pathos** – helps the speaker to connect with the audience through various emotions like anger, sadness, happiness, confidence, etc.

C. **Logos** – is considered an important element of Aristotle's communication model that signifies logic. The audience will not only be influenced by the speech but also the logic behind it. The speaker has to take the help of Logos in Aristotle's communication model and present statistics and facts so that the audience can believe and ultimately relate with him.

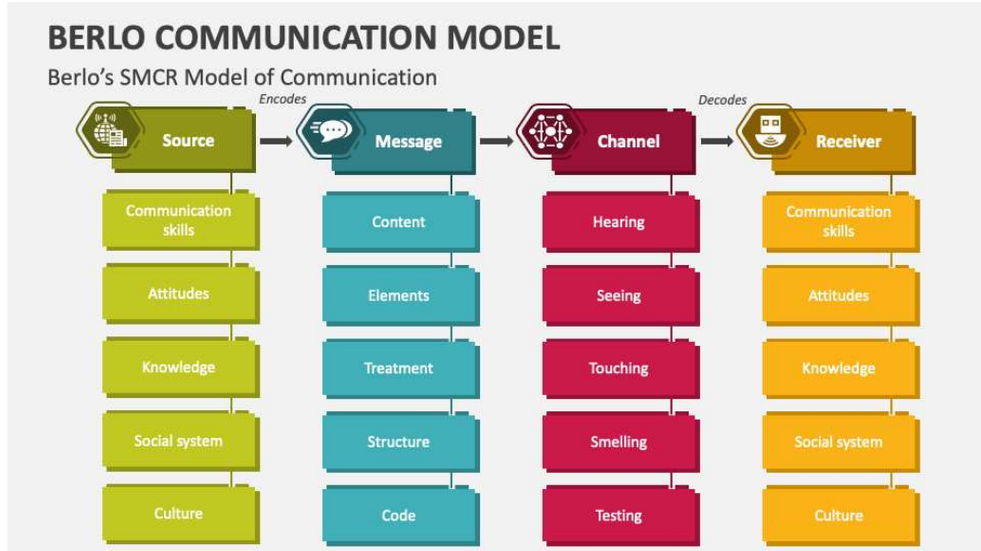
2. **Laswell's Communication Model** – In 1948, Harold Dwight Laswell described communication as being focused on the following Ws: ***Who*** says, ***What*** in ***Which*** channel to ***Whom*** and with ***What*** effect. The main goal is to transmit message with the effect as the result.



3. **Shannon-Weaver's Communication Model** – Claude Elwood Shannon and Warren Weaver's model of communication was introduced in 1949, a year after Laswell's, for Bell Laboratories. Originally for radio and television model for technical communication then later adopted in the field of communication.



4. **Berlo's Communication Model** – David Berlo's model conceptualized in 1960 is the most well-known among the communication models. This communication model is unique in the sense that it gives a detailed account of the key elements in each step.



Lesson 2: Communication within Globalization

It is said that globalization is the result of communication and assimilation among individuals, ethnicities, race, institutions, governments of various nations supported by technology and are compelled by international trade. From your exposure to diversity, you become sensitive to cultures and you value the differences of people in their gender preference, color, age, religion, affiliation, ethnicity, education, social, economic status, and political beliefs.

Contemplate on the following news and issues below:

1. What is going on in Israel and Gaza?
2. "Miseducation: The Failed System of Philippine Education"
3. Is Pink Still a 'Girl Color'?
4. The 72 genders

a. How do cultural and global issues affect communication?
b. How was communication back then, and now?
c. What is the role of social media to globalization?

LANGUAGE REGISTER

Language register (*also called linguistic register and speech register*) describes the way a person speaks in relation to their audience. A speaker modifies their language register to signal levels of formality according to their relationship to their audience and intended purpose of speech.

a. **Formal register** – appropriate for professional writing and letters to a boss, or someone we are meeting for the first time.
   Examples: business letters, letters of complaint, reports, official speeches, announcements, professional email messages.

   In using the formal language register, the following are to be observed:
   1. Do not use contractions like *won't, haven't, shouldn't, couldn't*, etc. unless you are quoting someone else.
   2. Spell-out numbers less than one hundred.
   3. Avoid using too much passive voice.
   4. Avoid using slang, idioms, exaggerations, and clichés.
   5. Avoid abbreviations and acronyms.
   6. Formal writing requires the good transitions words. (additionally, however, etc.)
   7. Always write in sentences.
   8. Write longer, more complex sentences.

b. **Informal register** – used when communicating with friends and family or to people you know very well.
   Examples: text messages, tweets, Facebook posts, chat messages, diaries and journals.

c. **Neutral register** – the tone that is used when expressing facts devoid of emotion.
   Examples: reviews, articles, feature writings (especially those that targets younger audiences)

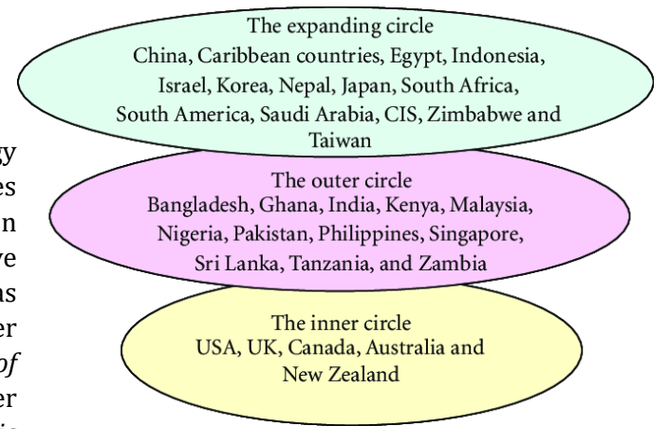
THOMAS BERTRAM REID

The term **register** was first used by the linguist *Thomas Bertram Reid* in 1956 and began to be largely used by other linguists who wanted to define register as a variation according to the user affected by other variables like social background, geography, gender, age, among others. This means that a person or a user of a language register possesses a range of register to suit him at different times with different types of audience.

English as a Specific Language

a. American English (AmE)
b. Australian English (AuE)
c. Black English
d. British English (BrE)
e. World Englishes (WE)

World Englishes is a terminology used to define the localized varieties of English as they are used or spoken in certain areas outside the native speakers of English. It was introduced by **Braj Kachru** together with the *Three Concentric Circles of Asian Englishes* or in other descriptions, the *Three Concentric Circles of English*.



Dimensions of Cultural Diversity

Trompenaars and Hampden (1997) reiterate that there are dimensions to recognizing cultural diversity in national cultures and that the manner by which people respond to certain questions about culture are attributed to the uniqueness of their culture. In (2009), Duanmu, Geppert underscored changes in these dimensions and listed them below:

1. **Universalism vs. Particularism**
   - ***Universalism*** – adhere to general rules, codes, values, and obligations that regardless of circumstance, same rules apply to different situations
   - ***Particularism*** – based on friendships and intimate relationships affecting situations on a case-to-case basis.

2. **Individualism vs. Collectivism**
   - ***Individualism*** – puts emphasis on the individual's wants, happiness, fulfillment, initiative, and welfare above those of the community.
   - ***Collectivism*** – decides for the greater good and values that works for the community undermining personal wants and desires.

3. **Specific vs. Diffused**
   - ***Specific*** – an individual sees his/her environment as a place where they can be themselves even without forming relationships with others.
   - ***Diffused*** – opposite of specific culture wherein they encourage camaraderie among others.

4. **Achievement vs. Ascription**
   - ***Achievement*** – those who value others on the account of their education, ability, success in chosen career, competition, and so on.
   - ***Ascription*** – those who value you according to your social connections, age or gender, your origin, or your religion.

5. **Neutral vs. Affective**
   - ***Neutral*** – people who make an effort to conceal their feelings because they have been taught that way, often times they are perceived as guarded and controlled.
   - ***Affective*** – they are often described as people who "wear their heart on their sleeves".

6. **Time Orientation: Sequential vs. Synchronic**
   - ***Sequential*** – those who follows a strict and particular order in doing things
   - ***Synchronic*** – those who deal with things by connecting the past and the future but do not focus on one or the order with which the two will take place, often times they deal with things as they come.

7. **Inner-Directed Orientation vs. Outer-Oriented Orientation**
   - ***Inner-Directed Orientation*** – they make a conscious effort in controlling the environment they are in.
   - ***Outer-Directed Orientation*** – believes in the domination of nature over mankind.

MULTIMODAL TEXTS

Forms of Multimodal Texts

a. **Paper** (books, comics, posters, etc.)
b. **Digital** (PowerPoints, blogs or vlogs, short films, videos, ads, etc.)
c. **Live** (interpretative dance, monologue, or role play)
d. **Transmedia** – combination of multimedia platforms

NOTE: To successfully create a multimodal text, you are required to consider a few things – your purpose, your message, your reader, your viewer, and your listener.

Types of Multimodal Texts

a. **Created texts** – texts authorized by non-native speakers for non-native speakers to achieve pre-determined curricular goals.
b. **Semi-authentic texts** – texts created by native/or non-native speaker, based on original language materials, but adapted to fit curricular needs.
c. **Authentic texts** – texts created by native speakers for native speakers for consumption in a native environment.
d. **Multi-modal texts** – texts that combine two or more semiotic (the study of signs and symbols and their use or interpretation) systems.

Semiotic Systems

1. **Linguistic**: comprising aspects such as vocabulary, generic structure and the grammar of oral and written language.
   Examples: *WHY SOME FOODS "EXPLODE" IN YOUR STOMACH, HOW I IMPROVE MY MEMORY IN ONE EVENING, THE SECRET OF MAKING PEOPLE LIKE YOU*
2. **Visual**: comprising aspects such as color, vectors and viewpoint in still and moving images.
3. **Audio**: comprising aspects such as volume, pitch, and rhythm of music and sound effects.
4. **Gestural**: comprising aspects such as movement, speed, and stillness in facial expression and body language.
5. **Spatial**: comprising aspects such as proximity, direction, position of layout and organization of objects in space.
